

Description:

The Nutrition Assistant system contains two main entities: User and Suggestion.

- The User entity stores user details such as name, email, password, age, gender, height, and weight.
- The Suggestion entity stores nutrition suggestions generated based on the disease entered by the user.
- A one-to-many (1:M) relationship exists between User and Suggestion.
- One user can have multiple nutrition suggestions.
- Each suggestion belongs to only one user through the user foreign key.

Relationship:

User (1) ----- (M) Suggestion

Entities:

1. User

- `_id` (Primary Key)
